

SNAPCOOK

TURN AVAILABLE INGREDIENTS INTO DELICIOUS RECIPES WITH JUST ONE SNAP.

The Problem

Many people throw away unused or leftover ingredients because they don't know what to cook with them.

Deciding what recipe to make — using available ingredients — is often time-consuming and uncertain, leading to either waste or settling for limited meal options.

The Solution

Letting users take a photo of ingredients (fridge, pantry, produce, etc.), and automatically identifying usable items.

Generating recipe recommendations tailored to the available ingredients — turning what might go to waste into a tasty meal.

Reducing food waste and encouraging smarter consumption — making cooking easy, fun, and resource-efficient.
