cotentaigeneration

Automate content creation with AI: From concept to draft in seconds.

The Problem

Creating content – articles, blog posts, documentation, marketing copy – is time-consuming and labor-intensive.

Many creators or small teams struggle with consistent content production due to writer's block, limited time, or lack of writing expertise.

The Solution

Rapid generation of drafts (articles, blogs, copy) from minimal input (title, prompt, outline) – cutting down creative overhead.

Scalability: produce multiple pieces of content quickly, enabling frequent updates, SEO-driven content pipelines, or bulk content needs.

Tech Stack

Next.js 16.0.1 with React 19.2.0

Motia 0.8.3 (event-driven, type-safe backend framework)

PostgreSQL (Neon serverless)

Neon Auth (automatic user sync)
